

Boss Hog Extra® Woven Steel Wire Flooring

Woven Tough

Description:

J&L has been providing the hog production industry with woven steel wire flooring for over 40 years. During that time, we have listened to the requests of our customers and taken the opportunity to use our resources and current technology to search for ways to improve upon the existing product. Boss Hog Extra® is J&L's answer to providing a long-lasting floor that will hold up against the harsh demands of the hog production industry. Environmental testing completed by an independent test lab has shown Boss Hog Extra® lasting over 15 times longer than our previous flooring product while exposed to an aggressive salt spray (ASTM B117) environment. Results suggest not only will it outlast other woven wire flooring, but testing found it to be comparable to other metallic floors that are post-coated for protection (check out our technical bulletin that discusses the testing and results). Boss Hog Extra® comprises round steel wire that is drawn and then galvanized in house using our own proprietary coating method. At J&L, we oversee this operation to ensure full control over the production of the wire and coating process so that our customers receive only the best quality flooring available. If you like the "Made in America" label, and a product that will perform to expectations, then Boss Hog Extra® is the product for you; Flooring designed and assembled with pride.

Construction:

Our woven steel wire flooring uses our patented "double smooth" design. This design does not contain grooves or rough surfaces that can be uncomfortable for pigs yet provides for excellent traction since skid-free footing means fewer injuries. In addition, our flooring does not contain ridges, laps, welds, or sharp edges along its surface, an unwanted characteristic found in some competitor's products. The open woven pattern of the steel wire permits the space necessary for the passage of waste making clean up effortless. Unlike polymer flooring where bacteria can become trapped within the surface of the polymer itself, a steel wire surface is less likely to trap these harmful bacteria. Flushing and cleaning of the woven wire is easy, and the flooring is designed to keep the sows and piglets dry reducing the spread of enteric diseases. J&L uses two sizes of steel wire to manufacture Boss Hog Extra®: a heavy 3-gauge, or a super-heavy 1/0-gauge zinc-coated steel wire. Call our friendly staff today to answer any questions and to place your order.

Double-Smooth Design

The double-smooth pattern provides a uniform surface that is easy on the feet. No sharp edges that could harm, injure, or cause unwanted damage.
